Combustion Management Systems

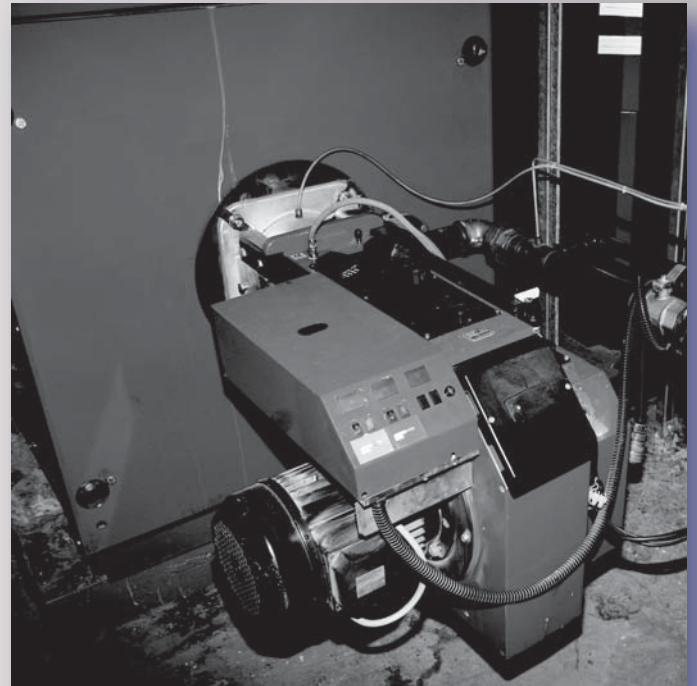

## London Hotels benefit from Autoflame and Limpsfield High Performance Burners

Sanderson and St Martins Lane, Morgans Hotel Group's London Hotels; are benefitting from the efficiency improvement and reliable performance delivered by Limpsfield High Performance Burner with integrated Autoflame MM combustion management system. Technology that ensures energy is used efficiently and the hotel's carbon footprint is kept to a minimum.

Trusted with some of the most critical boiler applications worldwide, Autoflame is relied upon to deliver boiler house projects and optimisation for new and existing applications across the world.

A focus on reducing green house gas emissions, leading to financial savings has lead many hotels, including the Intercontinental Group to endorse Autoflame's products and services. Analysis of the St Martins Lane gas consumption for a 12 month period after the installation verified a 20% energy saving.

**"We are pleased with the savings and the equipment is reliable: we would recommend Autoflame for other hotels."**

If you would like to find out how Autoflame can work with you to reduce fuel spend and cut harmful emissions get in touch today and ask about a complimentary Combustion Efficiency Audit.

As leaders in the hotel industry, Sanderson and St Martins Lane hotels have realised the financial and environmental benefits of engaging Autoflame Engineering to deliver an energy efficiency project for their boiler house.

Located in London, the combustion management systems manufacturer Autoflame Engineering also maintain and service the boiler plant at the luxury St Martins Lane hotel together with its sister hotel Sanderson, Soho.

Autoflame implemented and managed a well defined program of works, including new boilers for St Martins Lane. The existing burners at both hotels were systematically replaced with Limpsfield without interruption to business or disturbance to guests.

Autoflame MM Mini Mk7 Evo's precision in delivering the optimum air /fuel ratio to the burner. Complimented with the engineered ability of the Limpsfield burner to turn down 5:1 ensures gas is burnt optimally. From peak demand in the winter months through to summer load, the micro modulating MM controls deliver what is required when it is needed. Avoiding wasted energy, whilst maintaining comfort and meeting demand.

As a result of energy savings and the increased reliability delivered by the Autoflame solution for St Martins Lane, Limpsfield burners with Autoflame were also installed at the Sanderson hotel.

"The solution is well manufactured to a high quality and the Autoflame controls have many features we have found beneficial. We were impressed with the minimal downtime that the projected needed, 15-20 minutes, and the installation went very smoothly. We are pleased with the savings and the equipment is reliable: we would recommend Autoflame for other hotels."

Andrew Burge - London, Regional Plant Engineer Morgans Hotel Group
